AZRA PATVI

Data Scientist | Machine Learning Engineer | Python · Scikit-learn · TensorFlow · FastAPI · Flask · SQL
9028286738 | azrapatvi@gmail.com | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Data Scientist with hands-on experience in Python, scikit-learn, feature engineering, and model comparison. I build and tune machine learning, time-series, deep learning, and NLP models, and I deploy them as working apps and APIs. I have worked on real sales, image, and customer data, and I explain results in simple words so people can act on them.

SKILLS

Programming & Data: Python, Pandas, NumPy, SQL, MongoDB, Jupyter Notebook, Git, GitHub.
Machine Learning: Scikit-learn, Feature Engineering, Data Preprocessing, Model Comparison, Cross-Validation, Hyperparameter Tuning, Class-Imbalance Handling, Outlier Handling, Random Forest, Decision Tree, Gradient Boosting, Linear Regression, SVR
Time Series: ARIMA, SARIMA, Prophet, LSTM, ADF Stationarity Testing, Time-Series Forecasting
NLP: Text Preprocessing, TF-IDF, Bag of Words, Word2Vec, VADER Sentiment Analysis, Language Detection
Deep Learning: TensorFlow, Keras, ANN, CNN, RNN, Transfer Learning, VGG16, MobileNet, EfficientNet, YOLO
Deployment & AI Applications: FastAPI, Flask, Streamlit, REST APIs, Model Serving, Gemini API

EXPERIENCE

AI/ML Intern (Full-Time) | CensorX.ai *Apr 2026 – Present*
- Built ML-based content moderation solutions to identify harmful text and unsafe media in realistic application screenshots, including a YOLO object-detection model that achieved 99%+ precision and recall on the evaluated dataset.
- Created an automated data-generation pipeline that produced approximately 42,000 realistic training images and improved the training dataset after identifying and fixing data-related issues that affected model learning.

Data Scientist & Software Developer (Part-Time) | Praseonix Software Solution Pvt. Ltd. *Apr 2026 – Aug 2026*
- Developed EduAI ERP, a college-management system combining face recognition, QR-based attendance, GPS validation, online exams, fee management, and MongoDB for storing and processing application data.
- Built data pipelines for department-wise result reports and AI/data features, while also managing team coordination, project planning, meetings, client discussions, project presentations, and daily business operations as COO.

Data Scientist Intern (Full-Time) | Vinayak IT Solutions, Kolhapur *Feb 2026 – May 2026*
- Analyzed a company-provided customer support dataset to answer 24 business questions, using data cleaning, exploratory analysis, and visualization to identify complaint patterns, service gaps, and customer satisfaction trends.

PROJECTS

AI-Powered Virtual Interviewer| LINK *Python, DeepFace, OpenCV, Gemini API, MongoDB*
- Developed an AI interview system that verifies the candidate's face at login, watches the webcam during the interview for missing or extra faces, and uses Gemini to create domain-based questions and check each answer. It gives written and spoken feedback, then a report on strengths, weak points and recommendations, saved in MongoDB and downloadable as a PDF.

Dr. One (Multi-Model Medical Backend) | LINK *Python, FastAPI, TensorFlow, CNN, VGG16, ANN, MongoDB*
- Built a FastAPI backend that serves 4 models: brain MRI CNN (about 91.5% test accuracy), ovarian ultrasound VGG16, kidney CT VGG16, and a PCOS ANN (about 92% test accuracy). All models are loaded once at startup.
- Each prediction returns a simple report with the result, confidence, an easy explanation and next steps, and saves it to MongoDB. The API also checks the image size and type before predicting.

AI-Powered Data Explorer | LINK *Python, Streamlit, Gemini API, Pandas, Seaborn*
- Built and deployed a Streamlit app that uses the Gemini API (gemini-2.5-flash) to explain any uploaded CSV and each column in simple language, and answers chat questions only from the user's own data. It also has automatic EDA (missing values, duplicates, data types, charts) and cleaning tools (mean, median, mode or zero fill, remove duplicates, download cleaned CSV).

Food Delivery Time Prediction | LINK *Python, Scikit-learn, XGBoost, FastAPI, Pytest*
- Built an end-to-end MLOps pipeline for food delivery time prediction, covering data cleaning, feature engineering, preprocessing, XGBoost training, evaluation, and model saving; achieved 3.11 min MAE, 3.89 min RMSE, and 0.827 R^2, and deployed the model as a FastAPI web application with Pydantic validation and Pytest testing.

EDUCATION

Bachelor of Technology in AIDS | Loknete Shamrao Peje Government College of Engineering, Ratnagiri — DBATU *2023–2026*
Diploma in Computer Engineering | Government Polytechnic, Ratnagiri — Mumbai University | Percentage: 86.63% *2020–2023*

CERTIFICATIONS

- Complete Data Science, Machine Learning, Deep Learning & NLP Bootcamp (Udemy) | Certificate
- Complete Data Analyst Bootcamp from Basics to Advanced (Udemy) | Certificate
- Complete 2025 Python Bootcamp: Learn Python from Scratch (Udemy) | Certificate
