EDUCATION

Loknete Shamrao Peje Government College of Engineering Ratnagiri, affiliated to DBATU University

Bachelor of Technology (B.Tech) in Artificial Intelligence and Data Science — 2023 – present

Government Polytechnic Ratnagiri, affiliated with Mumbai University

Diploma in Computer Engineering — 2020 - 2023

CGPA: 86.63%

TECHNICAL SKILLS

- **Languages:** Python, SQL,PHP, HTML5, CSS, Java, JavaScript, R, VB.NET, C, C++
- **Web & Backend Technologies:** Flask, FastApi, Streamlit, AJAX, jQuery, Bootstrap, AngularJS, NodeJS
- **Machine Learning :** Scikit-learn, Random Forest, Gradient Boosting, Linear Regression, KNN, Decision Tree, XGBoost, SMOTE, RandomizedSearchCV, GridSearchCV, Model Serialization (Pickle / Joblib)
- **GenAI & AI:** GPT API and Gemini API Integration, Prompt Engineering
- **Data Analysis:** Exploratory Data Analysis (EDA), Statistics & Data Cleaning, Feature Engineering, Pandas, NumPy, Matplotlib, Seaborn, Plotly, Correlation Analysis, KPI Dashboards
- **Databases:** MySQL, MongoDB, Sqlite3
- **Tools:** VS Code, PowerBI, Tableau, MS Excel, Jupyter Notebook, Google Colab, Android Studio, Git, GitHub

EXPERIENCE

Data Scientist Intern — Vinayak IT Solutions, Kolhapur | JOINING LETTER — **Feb 2026 - May 2026**

- Worked on multiple real-world Data Science, Machine Learning, and Forecasting projects, gaining hands-on experience in data preprocessing, exploratory data analysis (EDA), feature engineering, model training, evaluation, and deployment using Python, Scikit-learn, Streamlit, and Flask.
- Developed a Walmart Sales Prediction System using Machine Learning and Time Series Forecasting models including Linear Regression, Random Forest, Gradient Boosting, ARIMA, SARIMA, and Prophet, achieving high prediction accuracy ($R^2 \approx 0.93$). Built an interactive Flask web application for real-time sales forecasting.
- Built a Customer Support Ticket Analysis & Satisfaction Prediction System using real customer complaint data provided by the company to solve real-world business problems such as identifying complaint patterns, service inefficiencies, and customer satisfaction trends.
- Created a Movie Recommendation System using Content-Based Filtering and Cosine Similarity with TMDB API integration and a Streamlit-based web interface.

Data Science & Analytics Intern — AMDOX Technologies | CERTIFICATE — **Mar 2026 – Apr 2026**

- Completed a Data Science & Analytics Internship at AMDOX Technologies, gaining practical experience in Machine Learning, Data Analysis, and predictive modeling while working on real-world datasets and problem-solving tasks.
- Developed a Cryptocurrency Price Predictor Web Application using Python, Streamlit, Machine Learning, and Deep Learning models such as ARIMA, SARIMA, Prophet, and LSTM to analyze cryptocurrency trends and forecast future prices. Integrated live cryptocurrency data, performed volatility analysis, sentiment analysis on crypto news, and built interactive visualizations for real-time market insights and forecasting.
- Demonstrated strong dedication, professionalism, teamwork, and technical growth throughout the internship while successfully completing assigned tasks and project development activities.

Deloitte – Data Analytics Virtual Job Simulation (Forage) | CERTIFICATE — **July 2025 - August 2025**

- Completed a virtual internship simulation performing real-world data analytics tasks, including cleaning, organizing, and classifying datasets in Excel to identify patterns and business insights.
- Designed and interpreted Tableau dashboards, translating complex data into actionable insights to support data-driven decision-making in consulting scenarios.
- Applied data-driven thinking to practical business problems, gaining hands-on exposure to the role of data analytics in technology and consulting, while enhancing problem-solving and analytical skills.

Kolte Computers Internship (Technical Intern & Professional Development Trainee) | CERTIFICATE — **July 2022 - August 2022**

- Assisted in conducting scholarship mock tests for school students, helping market the test product and ensuring smooth execution of all technical tasks.
- Provided technical support for online evaluation software and maintained hardware and software for smooth operations.
- Supported event management for prize distribution programs, gaining hands-on experience in troubleshooting and coordination.

PROJECTS

VehicleAI — Vehicle Price Prediction Web App| LINK

- Built a full web app using Flask and Machine Learning where users can predict the price of used cars, bikes, and EVs by entering details like brand, age, km driven, and engine power. Trained 3 separate ML models using Scikit-learn with proper data cleaning, feature encoding, and scaling pipelines saved using Pickle and Joblib.
- Built a Fair Price Checker where users enter a seller's asking price and the app tells if it's a good deal or overpriced, and a Budget Finder that scans the real dataset and shows every vehicle within the user's budget. For EVs, used a dataset of 306 models with automatic Euro to ₹ conversion.

- Deployed the full app with 5 separate pages using Jinja2 templates, dynamic forms, and a clean responsive frontend built with pure HTM ,CSS and JS.

Chat With Your Data – AI-Powered EDA & Data Understanding Tool | LINK

- Developed an AI-powered Streamlit application using Google Gemini API to help users understand datasets, explain columns in simple language, and interact with data through chat-based Q&A.
- Implemented automated exploratory data analysis (EDA) and data cleaning tools, including handling missing values, duplicates, and generating downloadable cleaned datasets with visual insights
- Integrated ydata-profiling to produce detailed dataset reports, making raw data beginner-friendly and supporting practical, hands-on learning in data analysis.

AI-Powered Interview Simulation System using FastAPI | LINK

- Built with FastAPI and MongoDB with secure session-based authentication. Enabled real-time webcam/audio interaction, face registration, verification, and continuous monitoring using OpenCV & DeepFace. Includes live emotion and confidence analysis for interview integrity.
- Integrated Google Gemini API for question generation and answer evaluation with feedback. Supports speech-to-text/text-to-speech, interactive dashboard with scores, confidence, progress, and automatic PDF reports highlighting strengths, weaknesses, and recommendations

Movie Recommendation System | LINK

- Developed a Movie Recommendation System using Machine Learning and Content-Based Filtering to recommend similar movies based on genres, keywords, cast, crew, and movie overviews.
- Built the recommendation engine using CountVectorizer and Cosine Similarity, processing over 4800 movies to generate accurate movie suggestions based on content similarity.
- Integrated the TMDB API to fetch live movie posters and created an interactive Streamlit web application that displays top 5 recommended movies with posters in a user-friendly interface.
- Implemented complete data preprocessing techniques including data cleaning, stemming, feature extraction, vectorization, and similarity matrix generation using Python, Pandas, Scikit-learn, NLTK, and Joblib.

CERTIFICATION

- Complete Data Science, Machine Learning, Deep Learning & NLP Bootcamp — (Udemy) | **CERTIFICATE**
- Complete Data Analyst Bootcamp From Basics To Advanced – (Udemy) | **CERTIFICATE**
- Complete 2026 Python Bootcamp: Learn Python from Scratch – (Udemy) | **CERTIFICATE**
- Generative AI Course: Build Innovative Apps and Websites – (INTERNSHALA) | **CERTIFICATE**
